

IDEAS

FLOW FROM MINOR PARTIES

Name: Kelly Truong

Sheet 1

FIT3179

CATEGORISE

FILTER

Barbell

20 histograms

QUESTION

→ How will I make the following lesson cognitive load?

→ Use intuitive colouring eg Labour Coalition

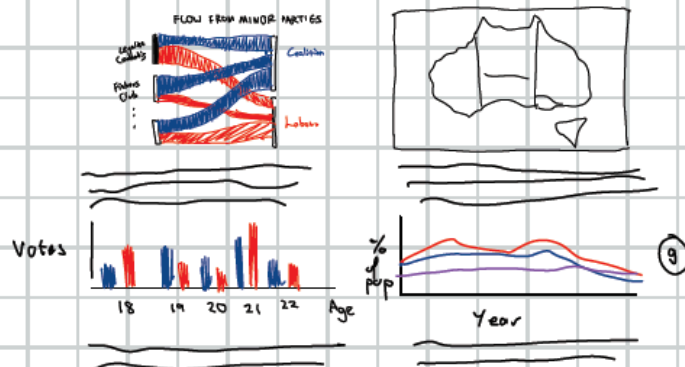

→ Will it be too repetitive if a lot of the idioms revolve around votes?

→ Other topics will be included & annotations to highlight interesting parts in the idioms.

LAYOUT

The Australian Political Landscape

PARTY	DESCRIPTION
Labour	—
Coalition	—
Greens	—
~	~
~	~

Title: The Australian Political Landscape

Author: Kelly Truong

Sheet 2

Task: 3174 Viz 2

OPERATIONS

Filter ⑨ by state

Tooltip for map

Option to change diverging colour palette for colour blind?

Axes Scales (Range change options (slider))

FOCUS

PARTY	DESCRIPTION
Labour	—
Coalition	—
Greens	—
~	~
~	~

Focus on **educating** audience by providing a table of contents

After doing so, readers can better understand the context of flow from minor parties

DISCUSSION

Is a big table for description too much text?

→ A lot of the data will be available on data.gov.au

LAYOUT

A Divided Australia

COALITION

LABOUR

EXPENDITURE

INFRASTRUCTURE

DEFENCE

TOURISM

Liberal Voting Distribution

Labour Voting Distribution

of votes

FOCUS

COALITION

LABOUR

Clear Division
in both concept
AND layout
of page

Showing visually the
Division

Title: A Divided Australia

Author: Kelly

Sheet 3

Task 3/79 Viz 2

OPERATIONS

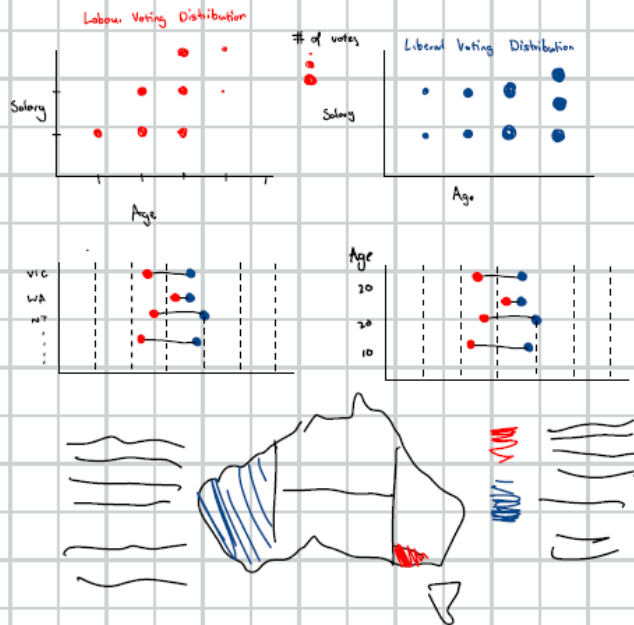

- Highlighting options
- Zoom on map
- Axes Scale/Range Change options (slider)
- Highlighting / Filtering by state

DISCUSSION

- Not as many interaction options on this page
- Include more interesting topics or images to gain attention
- Attempt to make the layout more of a poster / infographic style?
- consider horizontal scrolling to add some sort of uniqueness / variety to the page

LAYOUT

VOTES, PLACES, PEOPLE

Title: Votes, Places, People

Author: Kelly

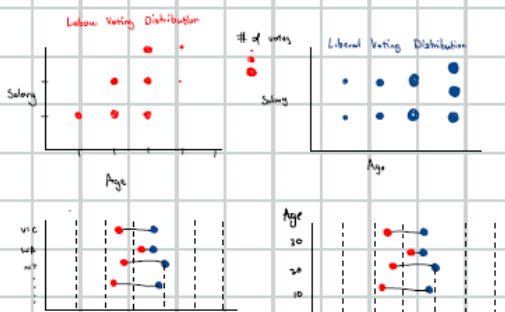

Sheet 4

Task 3.79 viz 2

OPERATIONS

- Option to change x-axis scale for both barbell graphs
- Filter marks in 2D histograms by size/quantity
- Zoom in map

FOCUS

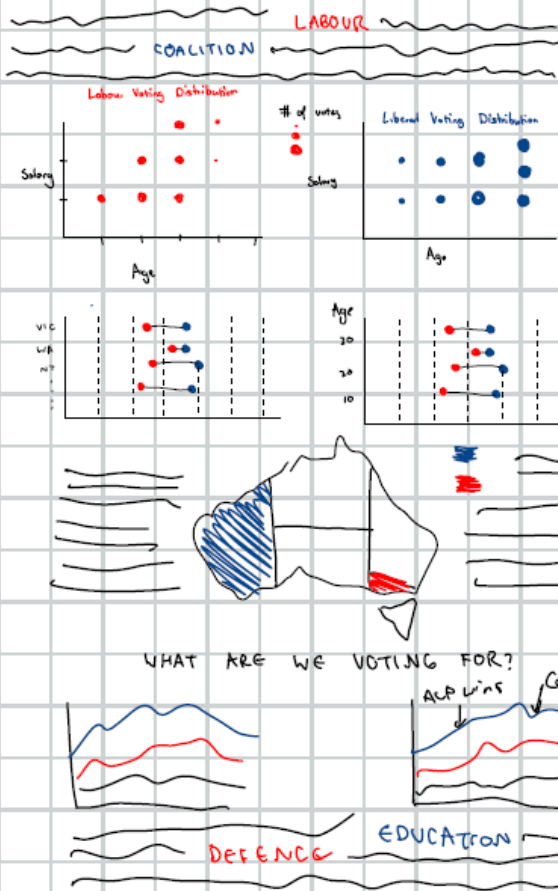

Again, Focus is dividing statistics by Labour/Coalition

DISCUSSION

- If there isn't much contrast/notable patterns in the 2D histograms, is it still worth adding into the page
- Yes, even if it looks like this  it tells a story that votes are nonuniformly distributed
- Is there official accessible data regarding votes and salary groups or will there be another attribute to categorise the 2D histogram by?
- Either scope or find another ordinal attribute

LAYOUT

VOTES, PLACES, PEOPLE

Title : Votes, Places, People

Author: Kelly

Sheet 5

Task 3179 Viz 2

OPERATIONS

- Filter 2D histogram by mark size
- Option to alter scale / Range of x-axis for barbell chart
- Zoom in for map

FOCUS

By preceding the map w/
more context about the type
of people voting for ■ or ■, readers can better
understand the map.

Adding a map to divide the top half and bottom half of the page (which are a 2-column layout) will draw attention and make the map a focus point.

DETAIL

- 4 hrs total to scrape, clean, and format the data
- Add annotation to line chart for election years to clearly compare aftermath of voting
- 4 hrs for webpage formatting
- 4 hrs for vega-lite idioms
- 2 hrs for text/annotations

AI Declaration

I used AI in the following ways:

(i) generate the CSS and html framework for the webpage created..

I used Codex (<https://chatgpt.com/codex/>) to produce a framework of the webpage to input all the content and visualisations in the webpage. Prompts include:

Change the width of all the panels

Add an image into the background

Use a CSS framework for this webpage

Spell check all the written paragraphs

Colour code the given words inside the paragraph using red and blue

(ii) automated tasks like aggregating data, cleaning data, typo checking, formatting.

I used github copilot (<https://github.com/features/copilot>) to aggregate and clean csv data in a way that is readable to vega lite. Prompts include:

Aggregate flow.csv using the location column, by State level instead of LGA.

Write a script that bins age and income

Write a script that aggregates the turnout data by the state level
